CENTRAL BULL TEST STATION SUMMARY**

Prepared by: Scott P. Greiner, Extension Animal Scientist, Beef
Virginia Tech, Blacksburg, Virginia

Central bull testing programs for the performance evaluation and marketing of Virginia Beef Cattle Improvement Association member's bulls were carried out at two test stations located at Culpeper and in Southwest Virginia during the test season 2023-2024. One test group was developed at the Culpeper location and two test groups were developed at the Southwest location, and a total of two sales held.

I. CULPEPER

This was the 66th consecutive year of evaluating bulls at the Culpeper station. Virginia BCIA contracted with Riverview Farms Cattle LLC (Steve, Blake and Garrett Hopkins) at Louisa, Virginia to furnish development facilities, and provide complete care and management for a Senior group of bulls. This was the third year for BCIA bull development at Riverview Farms. The Culpeper Senior Bull sale was held at the Culpeper Agricultural Enterprises at Culpeper, Virginia. Virginia BCIA handled consignments, set rules, regulations and performance standards and certified records, and generally supervised the tests and sales, utilizing a committee composed of interested consignors with Kenneth Payne serving as Chair.

(1) THE BULLS AND THE MANAGEMENT

Thirty one Virginia BCIA members including 26 Virginia, 1 Tennessee and 2 West Virginia breeders tested bulls. One hundred sixty six Senior bulls (calved Aug. 15 to Nov. 30, 2022), were delivered to Riverview Farms June 27, went on 112 day test July 11 and came off test October 31, 2023. Bulls accepted for test were required to have a WDA of 2.5 pounds at delivery (with allowable shrink), and have a minimum EPDs based on breed (Virginia Quality Assured Feeder Calf Program genetic standards). Bulls met interstate health shipment requirements at delivery, and in addition had a negative anaplasmosis test, negative PI BVD test, and were required to be vaccinated for Clostridial diseases, IBR, PI3, BVD, BRSV, and Haemophilus Somnus before delivery. Upon arrival at the test station bulls were vaccinated for BVDV Types 1 and 2, IBR, BRSV, PI3 and Mannheimia haemolytica (Pyramid 5 + Presponse), 7-way clostridial (Vision 7), dewormed (Cydectin pour on), given Multimin, and administered a fly tag (Tri Zap). To be sale eligible bulls had to have a minimum frame score of 5.0, meet minimum YW EPD requirements as specified by the Virginia Quality Assured Feeder Calf Program, pass a breeding soundness exam (including semen evaluation as per Society for Theriogenology). Additionally, a committee evaluated all bulls for structural soundness and bulls found to be unacceptable structurally were not sold. A Sale Index comprised of 2/3 station index (station index = 2/3 test yearling weight ratio + 1/3 test ADG ratio) and 1/3 average EPD percentile (20% CE EPD, 20% WW EPD, 20% YW EPD, 20% MM EPD, 10% MB EPD, 10% REA EPD) was used to eliminate additional bulls to arrive at the number eligible for the sale. Bulls were required to meet all registration requirements from their respective breed associations including genotype related to genetic defects (bulls DNA-genotyped as necessary as part of the test). Coat color genotype was performed on bulls as needed. Approximately 70% of the bulls were cataloged for the sale. A portion of the bulls not qualifying for the sale were sold for slaughter at the conclusion of the test.

(2) RATIONS

Rations were formulated in cooperation with Virginia Tech Extension Animal Scientists. The feed was furnished by Riverview Farms (raised or purchased). Feed ingredients were charged at cost, plus a mark-up per ton of finished feed. Rations were formulated to contain 74% TDN and 14% crude protein (dry basis). Bulls were fed daily in fence-line feed bunks.

The following ingredients comprised the majority of the Senior ration: corn silage, corn, distillers grain, and commercial supplements. Ingredients were included based on availability and price. Chlortetracycline was fed during the warm-up period. A complete mineral containing an ionophore was included in the total mixed rations.

(3) **PERFORMANCE EVALUATION**

Bulls were weighed at 56 days and each successive 28 days. Ultrasound evaluation for fat thickness, ribeye area and percent intramuscular fat was conducted near the end of test. All ultrasound data was processed through a centralized ultrasound processing laboratory and submitted to respective breed associations. At the end of the test bulls were weighed, measured for hip height, evaluated for structural soundness, and had a complete breeding soundness exam, including a semen evaluation. At the end of the test, 75 Senior bulls were removed from the sale group based on failure to meet one or more minimum performance standards, soundness criteria, or were retained for home use. The remaining 88 bulls were cataloged.
