Dear Friends:

We invite you to join us on Saturday, December 12 at noon at the Culpeper Agricultural Enterprises for the 69th Annual Culpeper Senior Bull Sale. We are most appreciative of Steve and Blake Hopkins and family at Riverview Farms for the excellent job they do developing and managing the bulls. On Sunday afternoon December 6 from 1:00-4:00 PM we will host the annual Open House at Riverview Farms' bull development facility outside Louisa. We hope you can join us as this will be an excellent time to view the bulls and visit with the breeders and everyone involved.

The Culpeper Bull Test program is the oldest, continuously operated bull test program in the nation. While steeped in tradition and history, it is the core values of the program that have stood the test of time and sustained it for so many years. This includes a strong commitment on behalf of the consignors to purposefully construct genetics that will go home and work for you. Again this year, we had incredible interest in the Culpeper program with 175+ bulls evaluated. Only the top half will be sold! Study their pedigrees, performance, and phenotype and we think you will agree this is high quality set of bulls!

If you cannot join us in person, the sale will be available online through LiveAuctions.tv. Complimenting this, video is available on all the bulls which can be accessed on the BCIA website. We can also facilitate phone bidding, please reach out if you need assistance prior to or on sale day. We would be happy to assist you any way we can to secure a bull that meets your needs.

All bulls selling have passed a complete breeding soundness exam, including semen evaluation, as specified by the Society for Theriogenology. Volume buyer discounts are available with the purchase of three or more bulls. All bulls sell with the BCIA enhanced guarantee, which provides assurance for soundness and fertility. The BCIA consignors stand behind these bulls regarding their fertility and function. We will provide complimentary delivery for bulls following the sale.

Feel free to stop by Riverview Farms near Louisa any time to view the bulls. Contact any of the consignors, Steve 540-205-7798 or Blake 540-223-1886 at Riverview Farms, or myself at 540-231-9159 if we can be of assistance in any way. See you on Saturday, December 12!

Sincerely,

Scott P. Greiner
BCIA Educational Advisor

See page 36 for bidding options.

ABOUT THE BULLS AND THEIR PERFORMANCE

Scott P. Greiner, Extension Animal Scientist- Virginia Tech

The Virginia BCIA contracts with Riverview Farms Cattle, LLC at Louisa, VA to develop bulls for its members with the following basic objectives: (a) To provide a standard, impartial post-weaning gain test and development program that will furnish records which will be useful to the buyer and consignor in their breeding programs; (b) To provide a source of and market for performance tested bulls; (c) To provide quality genetics which address the demands of the industry; and (d) To serve as an educational tool for beef cattle improvement and promotion.

How the Bulls Have Been Handled

178 fall-born Senior bulls (calved August 15 through November 30, 2025) were delivered to Riverview Farm on June 30,2026 and went on test July 14 following a 14 day warm-up period. The bulls completed the performance test November 3. At arrival bulls were vaccinated for clostridial diseases, IBR, PI3, BVD, BRSV, Pasturella, Haemophilus Somnus, and dewormed. They were fed a silage-based ration with grain and commodity supplements and a vitamin/mineral premix. The ration was formulated to contain 75% TDN and 13% crude protein on a dry-matter basis.

Sale Requirements

The top half of the bulls within each breed test group sell based on the following criteria:
Growth EPDs: All bulls selling meet minimum genetic requirements (YW EPD) for Virginia Quality Assured (VQA) Purple Tag Feeder Calf Program.
Frame Score: Minimum frame score of 5.0 for all breeds.
Reproductive Soundness: ALL BULLS HAVE PASSED A COMPLETE BREEDING SOUNDNESS EXAM as defined by the Society for Theriogenology, INCLUDING SEMEN EVALUATION, internal palpation, scrotal circumference measure, and penal inspection.
Conformation: A committee evaluated all bulls for structural soundness and phenotype. Unsound or unsuitable bulls have been eliminated.
Sale Eligibility and Order: Additional bulls were eliminated and sale order established using an index combining individual performance (adjusted YW and test ADG) and EPDs (CE, WW, YW, Milk, MB, RE).

Health and Fertility

Negative Anaplasmosis and negative BVD PI test at delivery. Out-of-state health papers available on sale day. Passed breeding soundness exam INCLUDING SEMEN EVALUATION. Consulting veterinarian- Dr. John Currin, VA-MD Regional College of Veterinary Medicine. See inside back cover for guarantee.

PERFORMANCE RECORDS

Expected Progeny Differences (EPD)

An EPD is an estimate of the genetic value of an animal as a parent. Specifically, EPDs predict the difference in performance of the future offspring of a parent, compared to the future offspring from another parent in the same breed. EPD values may only be directly compared between animals within the same breed.

	Production EPDs					Maternal EPDs		Management EPDs			Carcass EPDs		
	CE	BW	WW	YW	DOC	MCE	Milk	CLAW	ANGLE	HS	MB	RE	Fat
EPD	+6	+1.0	+45	+92	+11	+7	+24	+.45	+.35	+.60	+.45	+.35	-.005

Production and Maternal EPDs

Calving Ease Direct (CE) - Predicts the ease with which a bull's calves will be born to first calf heifers. Higher EPD indicates a higher percentage of unassisted births.
Birth Weight (BW) - Predicts differences in progeny birth weight, measured in pounds. Higher EPDs indicate heavier birth weights.
Weaning Weight (WW) - Predictor of bull's ability to transmit weaning growth to his progeny. Expressed in pounds.
Yearling Weight (YW) - Predictor of bull's ability to transmit pre and post-weaning growth to his progeny. Expressed in pounds.
Docility (DOC) - Predicts difference in yearling cattle temperament, with a higher value indicating more favorable docility (expressed as percentage having most desirable temperament score).
Calving Ease Maternal (MCE) - Predicts the average ease with which a sire's daughters will calve as first-calf heifers, with a higher value indicating greater calving ease in first-calf daughters.
Maternal Milk (Milk) - Predictor of bull's genetic ability to transmit milk and maternal ability to his daughters. EPD expressed as additional pounds of calf weaned by the bull's daughters.

Management EPDs

Claw Set (CLAW) - expressed in units of claw-set score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal claw set (claw with toes that are symmetrical and even).
Foot Angle EPD (ANGLE) - expressed in units of foot-angle score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal foot angle (pastern with 45-degree angle with appropriate toe length and heel depth).
Hair Shed (HS) - expressed in units of hair shed score, with a lower EPD being more favorable indicating a sire should produce progeny who shed their winter coat earlier in the spring. Selection for this trait should improve the genetic potential for a sire's progeny to shed off earlier increasing the environmental adaptability of cattle living in heat stressed areas and producers grazing endophyte-infected fescue.

Carcass EPDs

Marbling (MB) - EPD predicts differences in USDA marbling score. Expressed in marbling score units.
Ribeye Area (RE) - Predictor of bull's genetic ability to transmit carcass ribeye area. EPD expressed in square inches.
Fat Thickness (Fat) - Predicts differences in progeny external fat thickness, measured between the 12 and 13th ribs. EPD expressed in inches.

EPD Accuracy (ACC)

Accuracy is an indicator of the reliability of an EPD. Accuracy values range from 0.0 to 1.0. Values approaching 1.0 are reflective of more information used in the calculation of the EPD, and less risk the EPD will change with additional information. I = interim EPD, PE or P = pedigree estimate, BK = backsolution EPD.

Multi-Trait Index EPDs

$VALUES	
$M	+60
$W	+55
$B	+125
$C	+220

Angus Maternal Weaned Calf Value ($M) - Index value expressed in dollars per head, is the expected average difference in future progeny profitability from conception to weaning. Includes both revenue and cost adjustments associated with differences in calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.
Angus Weaned Calf Value ($W) - Index value expressed in dollars per head, is the expected average difference in future progeny profitability differences due to genetics from birth to weaning. Includes both revenue and cost adjustments associated with differences in birth weight, weaning weight, milk, and mature cow weight.
Angus Beef Value ($B) - Represents the expected average dollar-per-head difference in the progeny postweaning performance and carcass value compared to progeny of other sires. Combines estimates of genetic merit for growth and carcass merit, which are adjusted for differences in costs of production and expected premiums/discounts associated with grid marketing of progeny.
Angus Combined Value ($C) - Index value expressed in dollars per head includes all traits that make up both Maternal Weaned Calf Value ($M) and Beef Value ($B).

Charolais Terminal Sire Index (TSI) - Predicts expected difference in economic merit between bulls when all progeny are placed in the feedlot and sold on a carcass grade and yield basis. EPD expressed in progeny dollars per head.

Gelbvieh Maternal Profit Index MPI) - A higher number represents more profitable genetics in scenario where calves are sold at weaning and replacements daughters retained in the herd. Bulls with higher MPI values would be expected to produce daughters with stayability and reproductive efficiency as well as other traits that lead to profitability in a production system where calves are sold at weaning.
Gelbvieh Feeder Profit Index (FPI) - Terminal index designed to aid producers in selecting sires whose progeny will perform in the feedlot and carcasses are sold on grade and yield system.

Hereford Baldy Maternal Index (BMI) - Index designed for commercial cow-calf producers who use Hereford bulls in rotational crossbreeding programs on Angus-based cows and heifers. Retained ownership of calves through the feedlot phase of production is assumed, with fed cattle marketed on a Certified Hereford Beef pricing grid.
Hereford Certified Hereford Beef Index (CHB) - A terminal sire index, where Hereford bulls are mated to British-cross cows and all offspring are sold as fed cattle on a CHB grid.

Simmental All Purpose Index (API) - Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.
Simmental Terminal Index (TI) - Predicts expected difference in economic merit between bulls when all progeny are placed in the feedlot and sold on a carcass grade and yield basis. EPD expressed in progeny dollars per head.

Red Angus HerdBuilder Index (HB) - Maternal selection index that predicts the economic differences of animals for traits that are important from conception through weaning. Expressed as dollars per head born, HB is calculated based on the scenario that bulls are mated to heifers and cows, replacement heifers are retained and all remaining progeny are marketed at weaning.
Red Angus GridMaster Index (GM) - Predicts the average economic difference of non-replacement calves through the postweaning phase of production. GM places selection pressure on growth, feedyard performance and carcass traits. Expressed as dollars per head born.

Percentile (%Rank) Rankings on EPDs - Found in front of catalog. Indicates where EPD ranks relative to all other bulls evaluated of the same age within breed. 5 = EPD ranks in top 5% of breed for that trait. 70 = EPD ranks in top 70% of the breed for that trait.

Individual Performance

	BW	WW	Test YW	ADG	End Wt.	Frame	Scrotal	U%IMF	URE	UFAT
Perf.	82	740	1215	3.75	1375	6.0	35.5	3.75	13.8	0.25
Ratio	102	108	105	110				120	107	95

Birth Weight (BW) - Bull's actual birth weight, and within herd ratio. ET = embryo transfer.
Weaning Weight (WW) - Bull's 205-day weaning weight adjusted for age of dam, and within herd ratio. ET = embryo transfer.
Yearling Weight (Test YW) - Beef Improvement Federation adjusted 365-day weight calculated from off-test weight, and adjusted for age of dam. Ratio relative to all bulls in test group (same breed and age).
ADG - Cumulative average daily gain for entire test period. Ratio relative to all bulls in test group (same breed and age).
End Wt. - Actual weight when bull completed test.
Frame - Frame score of bull at completion of test period.
Scrotal - Actual scrotal circumference in cm at completion of test.

Ultrasound Data

Ultrasound images were collected as part of the test procedures by Dr. Andy Meadows. Images were sent to an accredited laboratory for measurement determination and adjusted measures provided by breed associations.
Percent Intramuscular Fat (U%IMF) - Objective estimate of the percentage of intramuscular fat within the ribeye muscle (marbling) adjusted to 365 days of age. Ratio relative to all bulls in test group (same breed and age).
Ribeye area (URE) - Ribeye area measured in square inches adjusted to a constant age of 365 days. Ratio relative to all bulls in test group (same breed and age).
Fat thickness (UFAT) - Measurement presented is 12-13th rib fat thickness in inches. Measurements have been adjusted to 365 days of age (ratio relative to all bulls in same test group).
The following table presents breed averages for ultrasound traits for all bulls in each test group:

ULTRASOUND DATA BREED MEANSCULPEPER SENIOR BULLS: SCANNED 10/5/26

	Adj. UFat	Adj. URE	Adj. U%IMF
122 Angus	0.22	13.2	3.67
4 Charolais	0.27	13.6	3.02
6 Hereford	0.28	11.6	1.95
2 PB Gelbvieh	0.15	13.1	2.03
9 Gelbvieh Balancer	0.23	13.3	2.70
1 PB Simmental	0.12	14.0	2.10
29 SimAngus	0.19	14.0	3.19
3 Red Angus	0.25	14.8	2.93

Pedigree Information

Two-generation pedigree listed for each bull.
Sire - EPDs listed. ACC indicates accuracy which is reflective of the number of progeny recorded.
Dam - EPDs listed. **Age** indicates age of dam when bull was born. **WWR** lists number of calves with weaning data recorded and their average weaning weight ratio.

Coat Color & Polled/Horned Genotyping

Simmental, Simmental Hybrid, Gelbvieh, and Gelbvieh Balancer bulls have been genotyped for coat color. Homozygous black bulls are designated as such. Bulls not designated as homozygous black can be assumed to carry a red gene. Bulls genotyped and found to be homozygous polled are designated as such.

EID Number *Each bull has been tagged with an electronic RFID tag. The electronic identification number is provided in the catalog.*

Genetic Condition Genotyping

BCIA follows each breed association's policy regarding the testing and reporting of genotypes for genetic conditions. This policy also applies to registration requirements. Genotyping results, as appropriate, are provided in the pedigree documentation of each bull.

Genomically Enhanced EPDs

GE-EPD All bulls have had their EPDs enhanced through the use of genomics (DNA markers, molecular breeding values). Genomic results are incorporated into the computation of the EPDs for several traits, resulting in enhanced EPDs and accuracy values.

Retained Semen Interest

For some bulls, the breeder may elect to retain a semen interest. Bulls affected are designated in the catalog. In all cases, the buyer will have 100% possession and salvage value of the bull. Should the situation arise that the breeder desires to collect semen on the bull, they will be entitled to do so and work with the buyer in a mutually agreed upon manner (at breeder's expense). The buyer will be entitled to their portion of any revenue from semen sold on the bull (portion designated in catalog). Note that only a very small percentage of bulls selling with semen rights retained ever get collected.

Base Price

The base price on all bulls will be $3500.

MANAGEMENT OF THE YOUNG BEEF BULL

Scott P. Greiner Extension Animal Scientist - Virginia Tech

Management Prior to the Breeding Season

Your newly purchased yearling bull has recently completed a gain test, which provided a high plane of nutrition. Since the completion of the test, the energy level of the diet was reduced and intake limited to prevent excessive fat deposition. The bulls have been managed to be body condition score 6 on sale day. This will give the bull adequate reserves of energy for use during the breeding season. Yearling bulls can be expected to lose 100 pounds or more during the course of the breeding season.

Acquiring a new yearling bull at least 60 to 90 prior to the breeding season is critical from several aspects. First, this leaves ample time for the new bull to get adjusted to the feed and environment of his new home, as well as an opportunity for several new bulls to be commingled for a period of time prior to turnout. Secondly, adequate exercise, in combination with a proper nutritional program, is essential to "harden" these bulls up prior to the breeding season. A facility for the newly acquired bull that allows for ample exercise will help create bulls that are physically fit for the breeding season. The nutrition of the bull will be dependent on body condition. Yearling bulls are still growing and developing, and should be targeted to gain 2.0 to 2.5 pounds per day from a year of age through the breeding season. Bulls weighing approximately 1200 pounds will consume 25 to 30 pounds of dry matter per day. This intake may consist of high quality pasture plus 12 lbs corn, grass legume hay plus 12 lbs corn, or 80 lbs corn silage plus 2 lbs protein supplement. Provide adequate clean water, and a complete mineral free-choice.
Prior to the breeding season, all bulls should receive breeding soundness exams (BSE) to assure fertility. Bulls in this sale all passed a BSE. All bulls that are to be used should have a BSE annually. Because a variety of factors may affect bull fertility, it may be advisable to re-test these young bulls before the breeding season even if it has only been a few months since the pre-sale BSE.

Management During the Breeding Season

The breeding season should be kept to a maximum of 60 days for young bulls. This will prevent over-use of the bull, severe weight loss and reduced libido. Severe weight loss may impair future growth and development of the young bull, and reduce his lifetime usefulness. When practical, supplementing young bulls with grain during the breeding season will reduce excessive weight loss.

In single-sire situations, young bulls can normally be expected to breed a number of females approximately equal to their age in months. Using this rule of thumb, a newly purchased bull that is 18 months of age could be placed with 18 cows or heifers. Bulls used together in multiple-sire breeding pastures should be of similar age and size. Young bulls cannot compete with older bulls in the same breeding pasture. A common practice is to rotate bulls among different breeding pastures every 21 to 28 days. This practice decreases the breeding pressure on a single bull. Some producers use older bulls early in the breeding season, and then replace them with young bulls. The appropriate bull to female ratio will vary from one operation to the next based on bull age, condition, fertility, and libido, as well as size of the breeding pasture, available forage supply, length of the breeding season and number of bulls with a group of cows.

All bulls should be observed closely to monitor their breeding behavior and libido to ensure they are servicing and settling cows. Additionally, observe the cowherd to monitor their estrous cycles. Many females coming back into heat may be the result of an infertile or subfertile bull. All bulls should be monitored for injury or lameness that may compromise their breeding capability.

Management After the Breeding Season

Young bulls require a relatively high plane of nutrition following the breeding season to replenish body condition and meet demands for continued growth. Yearling bulls should be maintained in a separate lot from mature bulls, so these additional nutritional requirements can be provided. Body condition and projected mature size of the bull will determine his nutrient requirements during the 9 months following the breeding season. Bulls should be kept away from cows in an isolated facility or pasture after the breeding season. In the winter months, provide cover from extreme weather that may cause frostbite to the scrotum resulting in decreased fertility.

Cutting Edge Angus Genetics

Proud to offer lots 14 & 15

Lot 15 - Top Index Bull of the 2026 Sale

Backed by genetics of **"FHCC Majority 1551"** a sire whose daughters are making their mark in the industry, producing females selling $200,000 to $250,000. Lot 15 would be an exciting addition to any herd, having the maternal value and genetic potential needed for any program. Expect him to sire quality replacement females while also providing dependability as a clean up bull for Artificial Insemination practices.

Private Treaty Bulls and Heifers Available

MAKE YOUR CATTLE STAND OUT

You've made a significant investment in your genetics, but does the market recognize that? Stand out by differentiating your cattle with AngusLink℠ programs: AngusVerified℠ and the Genetic Merit Scorecard℠. AngusVerified validates your calves are sired by registered Angus bulls and make your cattle stand apart from other black hides on sale day. The Genetic Merit Scorecard gives buyers the confidence they need to pay more for your quality calves.

Users of the AngusLink programs earn **$13-15/CWT PREMIUMS** on average. Give us a call, and learn how to claim your competitive edge with AngusLink value-added programs.

The Genetic Merit Scorecard and AngusVerified are administered by IMI Global.

ANGUSLINK™ VALUE ADDED PROGRAMS

ANGUSLINK.COM | 816-383-5100

FINANCING FOR VIRGINIA'S CATTLEMEN

LOANS FOR:

- Cow/calf pairs, bulls, replacement heifers, stocker and feeder cattle

TERMS & CONDITIONS

Except for those stated in the below terms and conditions, there are no warranties, either expressed or implied, as to merchantability or fitness for a particular purpose with respect to the cattle being sold at this auction. The warranties and guarantees set forth in the "Terms and Conditions" are in lieu of all other warranties, either expressed or implied, and the remedies provided therein shall be the sole and exclusive remedy of the buyer, or any party claiming through buyer, for any breach of warranty or guarantee therein provided, and all other obligations or liabilities.

BIDDING: Each animal will be sold to the highest bidder. The person in charge will settle any disputes as to bids and his decision on such matters shall be final.

TERMS: Terms of the sale are cash, unless satisfactory credit arrangements have been established prior to the sale. All settlements are to be made with the clerks of the sales immediately following the conclusion of the sale and before any cattle will be released from the sale premises.

PURCHASER'S RISKS: Each animal becomes the risk of the purchaser as soon as sold, but it shall be the obligation of the seller to see that animals are fed and cared for free of charge to purchaser until loaded for shipment or until the expiration of 48 hours after the sale, whichever occurs sooner.

REGISTRATION CERTIFICATES: A transferred certificate of registry will be furnished to the purchaser for each animal within 45 days following date of sale or receipt of full payment.

HEALTH: All animals are eligible for interstate shipment, except as otherwise announced. Interstate health papers will be furnished for each animal requiring T.B. and Bangs tests in accordance with Federal Regulation.

ANNOUNCEMENTS: Any changes from information of any kind in this sale book will be announced from the auction box and such announcements shall take precedence.

BULL GUARANTEE: All bulls sold are guaranteed, via written contract between BCIA and the seller, to be breeders. Guarantee will be applicable to bulls which prove to be infertile, have structural soundness problems (including foot soundness), or have other issues which apply under a good-faith guarantee. Any bull that settles a reasonable number of healthy cows shall be considered a breeder. This guarantee is contingent upon the buyer providing proper management prior to, during, and after the breeding season. Proper management shall include appropriate nutrition, breeding management (bull to female ratio appropriate for bull's age, not commingling yearling bulls with mature bulls in same breeding pastures, proper observation of bulls during breeding season, etc.), and animal health care.

CLAIMS FOR REFUND OR ADJUSTMENT: All claims for refund or adjustment in the event the bull is a non-breeder due to infertility or unsoundness must be made in writing by end of first breeding season but not later than 12 months following the sale. It shall be the responsibility of the buyer to prove the animal is a non-breeder. A veterinarian's report on the causation of the bull being a non-breeder is required. If the bull proves to be a non-breeder, the seller shall be entitled to provide the buyer one of the following: a) full refund for the purchase price, b) replace the bull with another of equal value, or c) issue credit to the buyer redeemable at a future BCIA bull sale. The seller shall be entitled to any salvage value.

RIGHTS AND OBLIGATIONS: The above terms and conditions of sale shall constitute a contract between the buyer and seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.

All persons who attend the sale do so at their own risk. Neither Virginia BCIA, the Virginia Cattlemen's Association, the Bull Test Station or its management, nor any other person connected with the management of the sale, assumes any liability, legal or otherwise.

HOW TO PURCHASE BULLS AT THE AUCTION IF YOU CANNOT ATTEND:

Because Every Bid, Counts

LiveAuctions.TV 2.0

(817) 725-8595

1. **To Bid Live Via the Internet**
   The fastest real-time online broadcasting bidding and viewing
   - **Go to www.liveauctions.tv**
   - **Click "watch this event" (will take you to login page)**
   - **Find your sale (listed in date order)**
   - **If you have an account log in, if not click "*create new user*"**

   After logging in, you are able to view the sale. If planning to bid, register for a buyer number by clicking "register for a buyer number" in the top right-hand corner. Fill out the registration information, and click "**register now**". You will then be "pending approval". Once approved, a bidder status approval email will be received and the bidding number will appear in the top right of the sale page. We recommend registering for a buyer number at least 24 hours in advance of an auction. Sale day requests may still be accommodated.
   Buyers :: post sale, contact the sale host or management team for payment & shipping Proxy Bidding :: for those not able to watch in real-time, bids can be placed using the blue video tabs on the right of the log in screen.
   Support :: for support during the sale broadcast, chat live with one of our representatives. Otherwise, our support team is available @ 800-431-4452
2. We encourage the use of LiveAuctions.tv for bidding remotely. We can also accommodate phone bidding on specific lots. Please call Scott Greiner 540-230-2680 prior to the sale to arrange phone bidding.
3. **Absentee Bids**
   Please call Dr. Scott Greiner at 540-230-2680, and we will be happy to work with you to place your bids.

For those users on a **phone or tablet** download the **LiveAuctions.TV App**

GET IT ON Google Play Download on the App Store
